Note

- ► S2 includes exams (7.-18.12.) and holidays (23.12.-1.1.)
- ► S4 includes exams (15.-19.2.)
- ▶ S6 includes exams (4.-9.4) and is reserved for mainly polishing & documenting for final review (11.-13.4.)

Events

Time	Event	Participants
30.10. 16-18	Project kickoff	team + PO
13.11. 15-17	Sprint 0 demo	team + Coach
16.11. 11-13	Sprint 1 planning	team + PO
04.12. 16-18	Progress review I	team + PO + Coach

All events, locations, agendas and other details are uptodate in Google Calendar.

Process Overview

Neronet

A sprint planning session is organized at the start of each sprint.

- 1. Before the session
 - the PO makes sure the product backlog contains an ordered list of items with a description and a number depicting business value
 - the team plays planning poker to define effort estimates (story points) for each BI
- 2. During it the team and the PO
 - briefly define the increment's purpose, the sprint goal
 - move BIs from the product backlog to the sprint backlog
- 3. After it, the team
 - chews the BIs into smaller tasks
 - assigns effort estimates on the tasks by planning poker
 - assigns a developer and a reviewer to each task

Sprint review

At the end of each sprint, we

- demonstrate the stories we were able to get done
- adapt the product backlog based on the results, if needed

Overview

Events

Practices

Sprint retrospective

After the sprint review, we

- evaluate and rank teamwork practices
- discuss how teamwork could be improved
- remove/replace any bad practices
- plan implementation of new improvements
- give feedback to team mates

Daily scrums

On Wednesdays and Fridays we have a scrum in which everyone quickly explains what

- they did since last Scrum
- problems they have encountered
- they plan to do next

Work plans are adjusted depending on input.

Events

O

Information

Most weeks, we'll

- have a Scrum and a 6h session on Wednesdays
- have a Scrum and a 5h session on Fridays
- do some individual work remotely to cover up any missed sessions

Team sessions are mainly held in Maari.

Used practices and tools:

- Testing & quality assurance: DoD
- Communication: Email, Flowdock, Hangout/Skype, WhatsApp
- Backlog management: Agilefant
- ► Time tracking: Agilefant
- Version control: GitHub
- Collaboration: Floobits, ShareLatex, Google Drive
- Motivation: Six tactics

Quality assurance

Process Overview

Neronet

Schedule

Recurring event

Overview Events

Overview

Information

We guarantee quality by making

- sure team members adhere to the DoD.
- each member responsible for the quality of the code he reviewed.
- the PO is responsible for the business value of sprint goals and BIs and for making sure the team understands them.

Communication

Process Overview

Neronet

Schedule

Recurring even

Overview Events

Overview

Information

We use the following channels:

- Flowdock general forum for everyday discussion
- Email communication with PO and Coach
- WhatsApp/Phone urgent team communication
- Skype remote teamworking sessions

The SM communicates with the PO and Coach.

Backlog management

Agilefant is used for all backlogs.

- Version 1 the product backlog
- ► Sprint 0-6 the sprint backlogs

Practices

Time tracking

We track our worktime with Agilefant by logging each session duration as effort spent to a story or task.

Version control

We use Git with GitHub with branches:

stable - tested and working version

sprint - increment work in progress

► story X - story work in progress

Our development process has four steps:

- 1. We assign a developer and a reviewer for each story
- 2. The developer solves the story in a new branch
- 3. Then he asks the reviewer for a merge review
- 4. The reviewer determines whether the work meets the story requirements and the DoD
 - if not, he asks the developer to continue working on it
 - if yes, he merges the story branch to the sprint branch and the developer marks the story as done

Practices

Information

When we work simultaneously on the same documents we use Floobits, ShareLatex, or Google Drive depending on the document.

Floobits is connected to a Git repo clone which facilitates when working with many files. It is particularly suitable for collaborative code level planning and code reviews.

Motivation

Overview

Information

Six tactics:

- 1. Create common goals
- 2. Focus on facts
- 3. Develop multiple alternatives
- 4. Maintain a balanced power structure
- 5. Seek consensus with qualification
- 6. Use humour
